

Concept layout options

Feasibility Studies

When our Clients are uncertain on any of the parameters of a new project we will offer a feasibility study to help clarify the way forward. The service we offer will vary significantly depending on the activities to be undertaken.

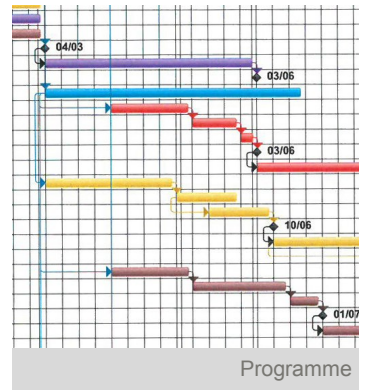

Typically a feasibility study may comprise the following contents:

- Description / clarification of the project brief.
- Analysis of our Client's business case if relevant.
- Drawings of existing and proposed layouts including a number of options if appropriate.
- Option studies with appropriate commentary on the pros & cons.
- 3D visuals where relevant.
- An analysis of manufacturing process/ flow/ equipment.
- Any other consultant reports commissioned.
- High level project programme.
- Budget estimate for the works.
- A conclusion including any key points, way forward and potential show stoppers.

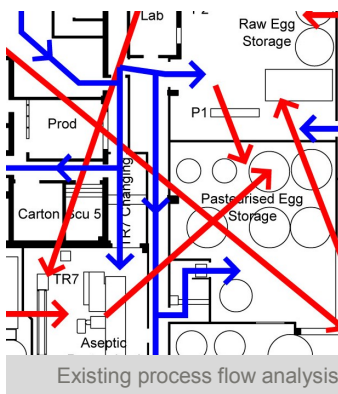

When providing a quotation for a feasibility study we will always spend sufficient time with you to clarify what is required to ensure that the exercise is undertaken as efficiently and thoroughly as possible and to offer best value for money.
